Title: Synopsys HAPS Developer eXpress FPGA-based Prototyping Solution

Abstract: FPGA-based prototypes deliver high-performance operation and real-world connectivity but unless they can be brought-up and deployed early in the ASIC development project these benefits are of little use. This presentation is an introduction to the new Synopsys HAPS Developer eXpress (HAPS-DX) platform that provides best of class prototyping hardware and software tools in a package that is focused on rapid bring-up of ASIC RTL IP prototypes for design teams who need state-of-the-art prototyping solutions.
